

2025 REAL WORLD TEST PLAN

GENERAL INFORMATION

Plan Report ID Number: 2025 RWT plan 11-01-2024

Developer Name: Doctorsoft Corporation

Product Name: Doctorsoft

EHR Version Number(s): v3.0

Certified Health IT Product List (CHPL) ID(s): 15.04.04.1365.Doct.03.02.1.240518

Developer Real World Testing Page URL: <https://doctorsoft.com/real-world-testing-plan/>

JUSTIFICATION FOR REAL-WORLD TESTING APPROACH

As per ONCs recommendation for “Real World Testing” the Doctorsoft EHR is adhering to all the criterions that are mentioned in this plan. Doctorsoft EHR has capability of send & receive transition of care referral summaries of providers (170.315(b)(1)). It supports documentation and reconciliation of clinical information like medical history, surgical details, allergies, medications & many more (170.315(b)(2)). This application is integrated to 3rd party application for prescribing the medications for patients electronically (170.315(b)(3)). The Doctorsoft EHR has user friendly main exam page which allows provider to look in to most of the details in one-page view (170.315(g)(7)), this page is also consists of images, Lab/Rad tests, Procedures etc. (170.315(g)(9)).(b)(10) will be tested separately.

The goal of this plan is to demonstrate that both the interoperability and conformance capabilities of the Doctorsoft EHR satisfies all the criteria mentioned. This will be done through the test scenarios justifications included in the plan.

Note: A single Real World Testing plan may address multiple products and certification criteria for multiple care settings.

**STANDARDS UPDATES (INCLUDING STANDARDS VERSION
ADVANCEMENT PROCESS (SVAP) AND UNITED STATES CORE
DATA FOR INTEROPERABILITY (USCDI))**

Standard (and version)	Not Applicable
Updated certification criteria and associated product	Not Applicable
Health IT Module CHPL ID	Not Applicable
Method used for standard update	Not Applicable
Date of ONC ACB notification	Not Applicable
Date of customer notification (SVAP only)	Not Applicable
Conformance measure	Not Applicable
USCDI updated certification criteria (and USCDI version)	Not Applicable

MEASURES USED IN OVERALL APPROACH

Description of Measurement/Metric

Criteria	Measurement/Metric	Description
Referrals §170.315(b)(1)	Over a 90-day period: 1) Number of CCDAs created 2) Number of CCDAs sent via edge protocols 3) Number of CCDAs received via edge protocols	As part of Real-World Testing, we will be evaluating outpatient: 170.315(b)(1) criteria. Our goal is to enhance patient care by providing secure information to referrals.
Clinical information reconciliation export §170.315(b)(2)	Over a 90-day period: 1) Number of times a user reconciled medication list data from a received CCDA 2) Number of times a user reconciled allergies list data from a received CCDA 3) Number of times a user reconciled problem list data from a received CCDA	The Doctorsoft EHR supports all kinds of Clinical information reconciliation and incorporation criteria which can be demonstrated by exporting the patient information on a regular basis which adheres to the C-CDA standards. Clinical information data export like medical history, Surgical history, allergies etc. over 3 months will demonstrate this measure. Data will be verified manually
Electronic prescribing § 170.315(b)(3)	Over a 90-day period: 1) Number of prescriptions created 2) Number of prescriptions changed 3) Number of prescriptions canceled 4) Number of prescriptions reviewed.	This measure will provide us the count of electronic prescriptions for selected providers (all options are available) for the entire Practice from the specified period (3 months) (using PI report from Doctorsoft). This measure will also give us details of prescriptions (route/SIG/medications etc.).

<p>Patient Engagement §170.315(e)(1)</p>	<p>Over a 90-day period:</p> <ol style="list-style-type: none"> 1) Number of views of health information by a patient or authorized representative 2) Number of downloads of health information by a patient or authorized representative Number of transmissions of health information by a patient or authorized representative using email 	<p>This measure is tracking and counting how many patients are successfully logged into and accessed their patient portal account as well as email transmissions from the portal over the course of a given interval (3 months). The goal of the approach for Patient Engagement is to demonstrate and validate the patient activities through logs which will give us details about how many patients make use of patient engagement functionality through the patient portal. This data will be provided for 3 months.</p>
<p>Application access— patient selection § 170.315(g)(7)</p>	<ol style="list-style-type: none"> 1) Number of requests for a patient ID 2) Number of requests that provided sufficient information 3) Number of follow-up requests made using the provided patient ID 	<p>As part of the Real World Testing, we will be evaluating the 170.315(g)(7) Application access - patient selection criteria and test if the Doctorsoft application should be able to show selected patient's information, about demographics data, visit history, disease history, surgeries done, prescribed medicine, allergies.</p>
<p>Application access— all data request § 170.315(g)(9)</p> <p>Electronic Health Information Export §170.315 (b)(10)</p>	<ol style="list-style-type: none"> 1) Number of requests for a patient's Summary Record made by an application via an all data category request using a valid patient ID 2) Number of requests for a patient's Summary Record made by an application via an all data category request using a valid patient ID for a specific date range <p>Export USCDiv1 clinical data for a population of patients for use in a different health information technology product or a third-party system. This export can be used for many purposes, including data portability when a physician practice switches to a new EHR platform.</p>	<p>As part of the Real World Testing, We will be evaluating the 170.315(g)(9) criteria and test the patient's Summary Record, if the Data is coming as desired. It is expected to have a zero defect rate.</p> <p>We chose to concentrate on the aspects of this criterion that would:</p> <ol style="list-style-type: none"> 1) Demonstrate an EHR's ability to export batches of patient data in a straightforward fashion 2) Facilitate interoperability by providing the exported data in the form of valid C-CDA files that conform to the HL7 standards as described in the HL7 Implementation Guide for CDA® Release 2: Consolidated CDA Templates for Clinical Notes (US Realm). <p>Additionally, it includes a publicly accessible hyperlink to the export's format.</p>

Measurement/Metric	Associated Certification Criteria	Relied Upon Software
Care Coordination	§170.315(b)(1) Transitions of care	Data Motion (Version 6.6)
Care Coordination	§170.315(b)(2) Clinical information reconciliation and incorporation	NewCrop (Version 2.01)
Care Coordination	§170.315(b)(3) Electronic prescribing	NewCrop (Version 2.01)
Patient Engagement	§170.315(e)(1) View, download, and transmit to 3rd party	Data Motion – (Version 6.6)
Application Programming Interfaces	§ 170.315(g)(7) Application access— patient selection	
Application Programming Interfaces	§ 170.315(g)(9) Application access— all data request	MeldRx ver. 2.0
EHI Export	§ 170.315(b)(10) – Electronic Health Information Export	MeldRx ver.2.0

Justification for Selected Measurement/Metric

Criteria	Justification
Transitions of care (§170.315(b)(1))	This criterion requires the ability of a certified Health IT module to create CCDAs according to specified standards. However, it is not possible to consistently and reliably demonstrate that all required standards were used because not all CCDAs created in a real-world setting contain all the necessary data elements. We intend to demonstrate the required certified capabilities by demonstrating how often CCDAs are created and exchanged, using DataMotion Direct method, with other systems to demonstrate the certified capability is available and effective, regardless of the frequency it is used.

<p>Clinical information reconciliation export (§170.315(b)(2))</p>	<p>This criterion requires the ability of a certified Health IT module to take a CCDAs received via an outside system and match it to the correct patient; reconcile the medication, allergy, and problem lists; and then incorporate the lists into the patient record using NewCrop The expectation is each of these steps is done electronically within the certified Health IT module. We intend to record the frequency that providers are electronically reconciling and incorporating CCDAs that were received from outside providers to demonstrate the certified</p>
--	---

<p>Electronic prescribing (§ 170.315(b)(3))</p>	<p>capability is available and effective. This criterion requires the ability of a certified Health IT Module to perform prescription-related electronic transactions (eRx) using required standards. We intend to demonstrate the required certified capabilities are effective by demonstrating how often eRx transactions are</p>
<p>Patient Engagement (§170.315(e)(1))</p>	<p>This use case has three metrics which measure real world interoperability actions of patients and their secure portals. This measure will provide a numeric value to indicate both how often patients log into their patient portal to view, download, or transmit their health data. These activities show how patients commonly utilize a patient portal as well as the breadths of its use with other health care entities the patient will transmit their information to another provider using DataMotion</p>
<p>Interoperability and Data Exchange (§ 170.315(g)(7))</p>	<p>Doctorsoft provides access to specific patient data through the edgeMed or eRx interfaces, this will provide a metric on the use of APIs to access patient data. This will be verified through the review of the log files. We intend to record the frequency that patient ID requests are received by providers via API to demonstrate the certified capability is available and effective.</p>
<p>Application access— all data request § 170.315(g)(9)</p>	<p>This criterion requires the certified Health IT module to provide an API and supporting documentation that enable external applications to request all categories of patient data defined in the CCDS from the certified Health IT module. We intend to record the frequency that patient data requests for all categories are received by providers and fulfilled via API using MeldRx to demonstrate the certified capability is available and effective, regardless of the frequency it is used. Our expectation is there will be zero adoption of this certified capability by our users, so we have added interactive testing methodology for these capabilities to the test plan below to demonstrate the feature is available and functions as expected should any users elect to begin using this feature performed by examining reports from our eRx partner NewCrop. This will demonstrate that the transactions are successfully received by the eRx clearinghouse.</p>

<p>§170.315 (b)(10) Count of single patient export files created during a 3-month timeframe. This demonstrates the ability to export single patient files containing all their EHI.</p>	<p>Count of single patient export files created during a 3-month timeframe. This demonstrates the ability to export single patient files containing all their EHI. This metric will also provide information on the demand for this capability.</p>
---	---

Care Setting(s)

Care Setting	Justification
Ophthalmology care - Doctorsoft is a cloud based EHR for ophthalmology	Doctorsoft is a cloud based EHR that has been designed for ophthalmology specialty and it has one-page exam view EHR (Electronic Health Records) design for ophthalmologists. This is integrated with multiple 3rd party software to provide cost effective patient care.

Expected Outcomes

- 1) is compliant with the certification criteria, including the required technical standards and vocabulary codes sets;
- 2) is exchanging electronic health information (EHI) in the care and practice settings for which it is marketed for use; and/or,
- 3) EHI is received by and used in the certified health IT.

(from 85 FR 25766)

Measurement/Metric	Expected Outcomes
Transitions of care (§170.315(b)(1))	It is expected that the user is able to create a CCDA format for patient data transitions with the help of secure access that also includes the reason for referral, and the name and contact information of the provider. It is expected that the user is able to create a Summary Document that also includes the discharge instructions. It is expected that the provider will be able to review the progress. Our expectation is there will be moderate utilization by providers with a high success rate
Clinical information reconciliation export (§170.315(b)(2))	All the Clinical information reconciliation data like medications, medical history, allergy, surgery history etc. can be exported manually without any errors or losing any data. This will make sure that no data has been lost and it is accurate. Our expectation is there will be low utilization by providers with a high success rate.
Electronic Prescribing (§ 170.315(b)(3))	We will access our eRX system to run detailed reports on providers for Prescriber on eRX portal as well as on our EHR portal. We can easily get the number of successful electronic prescriptions over specified duration in detail. If we observe any failed electronic prescriptions, we will investigate and address accordingly. Our expectation is there will be high utilization by providers with a high success rate

<p>Patient Engagement (§170.315(e)(1))</p>	<p>The measurements will produce numeric results over a given time interval of a minimum of three (3) months. We will utilize various reports and audit logs to determine our measure count.</p> <p>For all measures, a successful increment indicates compliance to the underlying ONC criteria. It will show that patients can log into their patient portal to access their patient data and transmit their health data to a 3rd party. We will use the measure counts to establish a historic baseline of expected interoperability use so it can be used in subsequent real world testing efforts. Our expectation is there will be moderate utilization by patients for view and lower utilization for download and transmit with a high success rate for all certified capabilities.</p>
<p>Interoperability and Data Exchange (§ 170.315(g)(7))</p>	<p>Log files obtained during Real World Testing will be identified and used for analysis to validate the proper operation of criteria g(7) with less than 1 percent error rate experienced by users. We have added interactive testing methodology for these capabilities to the test plan to demonstrate the feature is available and functions as expected should any users elect to begin using this feature</p>
<p>Application access— all data request § 170.315(g)(9)</p>	<p>The real world testing will be identified and validated for accuracy and conformance with 170.315(g)(9) criteria, with less than 1 percent errors.</p> <p>We have added interactive testing methodology for these capabilities to the test plan to demonstrate the feature is available and functions as expected should any users select to begin using this feature.</p>
<p>§170.315 (b)(10) Count of single patient export files created during a 3-month timeframe. This demonstrates the ability to export single patient files containing all their EHI.</p>	<p>Count of single patient export files created during a 3-month timeframe. This demonstrates the ability to export single patient files containing all their EHI. This metric will also provide information on the demand for this capability.</p>

SCHEDULE OF KEY MILESTONES

Key Milestone	Care Setting	Date/Time Frame
Real World Testing plan submission	Ophthalmology care	November 2024
Begin collection of information as laid out by the plan	Ophthalmology care	March 1 to May 30 2025
Follow-up with providers and authorized representatives to understand any issues arising with the data collection.	Ophthalmology care	Quarterly, 2025

Key Milestone	Care Setting	Date/Time Frame
End of Real World Testing period/final collection of all data for analysis. Analysis and report creation	Ophthalmology care	December 2025
Submit Real World Testing report to ACB (per their instructions)	Ophthalmology care	January 2026

ATTESTATION

This Real World Testing plan is complete with all required elements, including measures that address all certification criteria and care settings. All information in this plan is up to date and fully addresses the health IT developer's Real World Testing requirements.
